WHOBRAIN

One brain over every tool your business runs. A whosystems product.

PRIMARY LOCKUP

MARK · STACKED LOCKUP

WORDMARK

THE IDEA

A sphere split into two hemispheres: the brain. The **signal node** is the same green node that sits on every whosystems mark, breaking out of the upper right. In the wordmark that node becomes the dot over the I. Set in Instrument Sans Bold, the whosystems typeface, with the exact whosystems spacing, set in caps.

One rule holds the mark together: the fissure and the ring around the node are the same width. Keep clear space equal to the node's diameter. Minimum 16 px for the mark, 96 px wide for the wordmark. Never recolor the node, rotate the mark, or close the fissure.
